

Standard Practice for the Design, Operation, and Evaluation of Supercooled Fog Dispersal Projects

ASCE/EWRI 44-20 (R2025)

This reaffirmed standard presents guidelines for programs aimed at dispersing supercooled fog. Extended periods of fog can have large economic impacts on aviation, tourism, transportation, and mining industries, as well as a negative effect on agriculture. These problems can be reduced using state-of-the-art supercooled fog dispersal technologies to increase visibility.

Standard 44-20 (R2025) is particularly useful to hydrologists, hydrometeorologists, environmental and water resources engineers, airport and mining operations managers, water managers with governmental agencies, surface transportation managers, and others who deal with the limitations posed by supercooled fog.
